2. Overview

2.1 Purpose

The purpose of this document is to describe the business rules to fulfil a service. It is an accompanying document to the web service schema's and the OBR.schema. The schema is the primary reference for the web service APIs and the schema is the primary reference for the data formats.

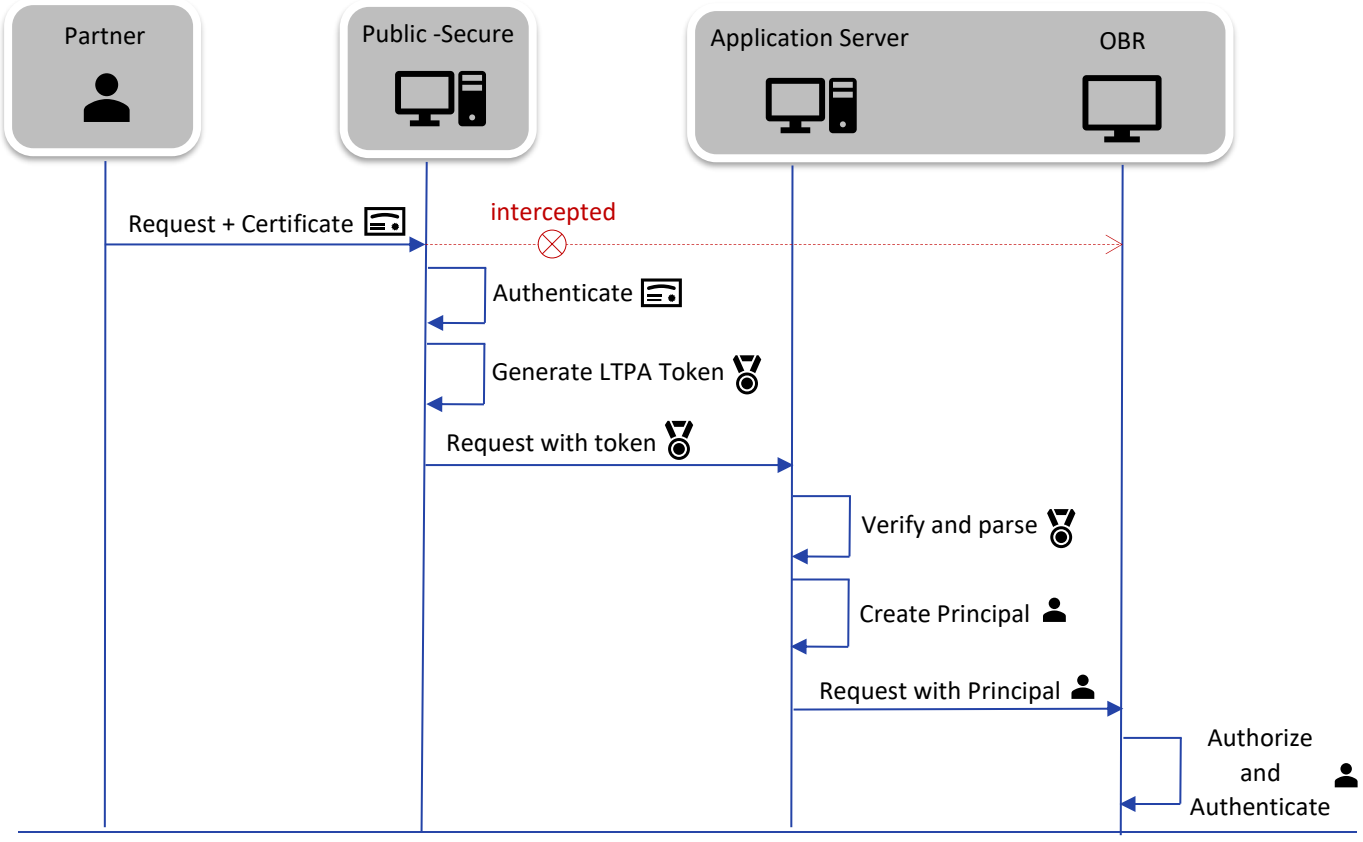

2.2 Authentication and Authorization

Upon successful authentication of a user a token will be passed to OBR. This token allows any application server to verify the user's authentication, obtain user details and access the local JEE-compliant User Principal.

When making a Web Service request, users are authenticated using an SSL certificate. Access to web services is managed through DataPower. DataPower has a policy that requires a trusted and authorized X509 cert in order to access OBR web services. When a WS request is received from a client with a valid cert, DataPower extracts the identity from the client certificate and uses it directly to create the LTPA token. DataPower then forwards the request to the app server with the LTPA token. The WAS application server uses the LTPA token to create the JEE identity. OBR then uses the JEE identity to implement fine-grained access control.

All authenticated access to the OBR application is mapped to an OBR user, not matter how the access was initiated. So authenticated web application and web service calls must map to an OBR user to use the system. This allows the application to use the same role-based authorization mechanisms and auditing for all request types.

By the time a request makes its way to the application, the session will either be already associated with a valid user ID or considered "anonymous". OBR maps the identifier it receives from the Portal token to an internal user identity stored within the OBR database. If either portal authentication does not exist (anonymous) or no matching internal identity found, IBR Web Services will deny access to the application and issue an error code.

2.3 Validation and Error Messages

2.3.1 **Validation**

The following types of validation will be applied to the request submitted via web service

#	Type of Validation	Description of Validation	Type of Error	Where Documented
1	Auth Token Validation	Request expired User is not authenticated (Authorization token is missing or invalid) Access denied User is not authenticated. Access denied. Principal mismatch. Illegal parameters. Access denied.	HTTP status code 400 HTTP status code 401 HTTP status code 403	OBR Application Portal Extraction Design
2	Pre Conditions Validation: Entity Type (Different Registry)	Some services only apply to certain entity types (e.g. File Annual Return service cannot be used to file a return for a Sole Prop) This validation will be treated in the same way as (10) Domain validation, as Sole Prop entity identifier will not be found amongst Corporation entities.	HTTP status code 500 and soap fault OOTB error response	Pre Conditions section of each service in OBR Business Services Catalog
3	Pre Conditions Validation: Entity Type (Same Registry)	Some services only apply to certain entity types.	HTTP status code 200 with an error message	Pre Conditions section of each service in OBR Business Services Catalog
4	Pre Conditions Validation: Status	For some services entity must be in one of the specific status (e.g. entity in Inactive status cannot be maintained)	HTTP status code 200 with an error message	Pre Conditions section of each service in OBR Business Services Catalog
5	Pre Conditions Validation: User	User must satisfy specified criteria to be able to use a business service (e.g. user must have authority over the entity to be able to maintain it)	HTTP status code 200 with an error message	Pre Conditions section of each service in OBR Business Services Catalog
6	Pre Conditions Validation: Other	Other business conditions/rules specific to the business service (e.g. entity cannot be maintained if it is suppressed from public view)	HTTP status code 200 with an error message	Pre Conditions section of each service in OBR Business Services Catalog
7	Form Validation: Mandatory Fields	Fields that are marked as Required must be populated. Fields that are marked as Conditional must be populated when conditions are met. Mandatory attributes will be enforced by schema validation	HTTP status code 200 with an error message	Request section of each web service in this document, column 'Required'
8	Form Validation: Business Rules		HTTP status code 200 with a list of errors against a particular attribute in the response Application error messages which can be customised	Form Validation section of each service in OBR Business Services Catalog

#	Type of Validation	Description of Validation	Type of Error	Where Documented
9	Form Validation: Max String Length	System will ensure that values for attributes with String data types do not exceed allowable string length.	HTTP status code 200 with a list of errors against a particular attribute in the response OOTB error response	Form Configuration section of each service in OBR Business Services Catalog
10	Attributes with fixed values	System will ensure that any attribute with fixed list of values uses allowable value (e.g. Country, Status, etc.) Such elements are usually represented in UI as dropdown boxes and radio buttons.	HTTP status code 200 with an error message	Form Configuration section of each service in OBR Business Services Catalog
11	Domain Validation	Web services that update or retrieve information will need to supply unique identifier (e.g. user id, entity id, etc.). An error will be returned if such identifier does not exist in the system or is not provided.	HTTP status code 500 and soap fault OOTB error response	N/A
12	Validate default values	System must ensure that default values provided in request for the attributes with Required = 'Yes Default' are as expected	HTTP status code 200 with a list of errors against a particular attribute in the response Application error messages which can be customised	Request section of each Web Service, columns 'Required' and 'Description'
13	Validate node identifier	Web services that require an ID to be provided for a node (e.g. DirectorOfficerId, DocumentID, etc.) need to match a valid available ID and will throw an error if it does not.	HTTP status code 200 with an error message on the requested ID element	N/A

2.3.2 Schema Validation

ServiceOntario has made the decision to not employ parser validation on the response message in Data Power to ensure the web service response conforms to the Schema. In lieu of parser validation, ServiceOntario requests that Teranet provide an indicator on an attribute level that indicates if an attribute is invalid in terms of the Schema in the web services response message. Schema Validation Process of a proofing of a structure and a format of message elements based on Schema.

It validates:

- presence of element (mandatory/optional).
- order of elements.
- format of element (e.g. date, numeric).
- size of text element (e.g. number of characters).
- pattern (email address or postal code pattern).
- accepted values list (enumeration).

The following changes applied to **response** caused by schema validation errors for all 28 web services:

- Instead of returning a very first error encountered where the schema validation had failed, Teranet will mark each non-conformant element with an attribute named *"valid" and* value = *"false".*
- message response status will be "Failed".
- No validation error will be returned in message response header.

Transitional Requirements for two versions of OBR.SCHEMA schema in SOAP Web Services

As a transitional solution, to accommodate different implementation timelines of both Service Providers, Teranet deployed two versions of OBR.XSD that can be used interchangeably with same OBR SOAP web services (WSDL). This dual version solution is not applicable to REST web services.

- First 'complex' OBR.XSD version is incorporating XML validation indicator on an attribute level that indicates if an attribute is invalid in terms of the XSD in the SOAP web services response message. This OBR.XSD contains complex types incorporating a new indicator.
- Second 'simple' OBR.XSD version supports simple types and does not contain the validation indicator.

Requests and responses produced by these schemas are identical except optional 'valid' attribute.

Both files have the same name but stored in different folders for a deployment package. Additionally, in a header of each OBR.XSD, there is a special notation after release version e.g., <Release Version>-complex or <Release Version>-simple respectively.

A process of validation will be done against the 'complex' OBR.XSD **only**.

3. Web Services

This section summarizes the OBR web services available for service providers. The business rules specific to the transactions are listed with each web service. The presentation rules e.g. formatting, logo, presentation instructional and help text, French translation, form alignment, sorting order are excluded from web services. The corresponding SCHEMA and OBR.schema defines the schemas for each web service and should be referenced for technical implementations.

3.1 WSC001 - Incorporate an Ontario Business Corporation

3.1.1 Description

Name	OnbisIncorporateBca
Id	WSC001
Authority	Authorized service providers users can submit a registration of a new Ontario Business Corporation via web service
Business Service	BCAR001
Description	This web service allows service providers to submit registration application for an Ontario Business Corporation (A) entity type. Registration will be automatically approved if successful.

3.1.2 Request

Attr Ref	Element Name	Description and Business Rules	Accepted Values
WSC001-01	ClientReference	The Client Reference number used on the payment transaction.	String
WSC001-02	ContactInformation	The contact information of the individual who should be contacted in relation to the filing. , outputs as a result of the filing will be emailed to the contact. See B-1 in the appendix • Only 1 individual can be a contact for the filing.	
WSC001-03	CorporationName	The proposed corporation name(s). See B-3 in the appendix • A corporation name can be an assigned number name (*NumberName* = 'true') or it can be a named corporation (*NumberName* = 'false') • For numbered name corporations, the legal element to be used in the name must be specified (*NumberNameLegalElement*) • For named corporations, • There are 4 options (*NameEntry*) for a name: English Name (*CorporationNameEn*), French Name (*CorporationNameFr*), English (*CorporationNameEn*) and French Names (*CorporationNameFr*), or a combination English/French Name (CorporationNameEn) • For each name option, a valid Nuans report is required	

Attr Ref	Element Name	Description and Business Rules	Accepted Values
		• Names must meet the entity name validation rules as defined in the OBR – Entity Name Generation and Validation catalog • For certain identical names, a legal opinion is required (*B-4 LegalOpinion*). WSA001 – Check Entity Name can be used to determine if a legal opinion is required (in addition to checking the name against Ontario specific rules)	
WSC001-04	IncorporationDate	The date of incorporation. • For numbered name corporations, the date must be >= today's date and not more than 30 days in the future • For named corporations, the date must be: • >= today's date; AND The lesser of: • The minimum of the Nuans report date(s) + 90 days; OR • 30 days in the future. If Incorporation Date is future dated then the corporation will not appear on the register (including searches) until that date becomes current.	Must match valid date format
WSC001-05	NAICSCode	The corporation's primary activity.	String
WSC001-07	OfficialEmail	The corporation's official email address. Output documents of filing services will be sent to this email.	Must match valid email address.
WSC001-08	RegisteredOfficeAddress	The corporation's registered office address. See B-9 in the appendix • Must be an Ontario address (*Region* = 'ON') • Cannot be a PO Box (OBR will not accept any PO Box addresses)	
WSC001-09	NumberOfDirectors	Specifies whether the corporation will have a fixed number of directors or min/max number of directors (*NumberFixedMinMax*) See B-10 in the appendix • If a fixed number type is selected then a fixed number (>=1) must be specified (*FixedNumber*) • If a min/max number type is selected then a minimum (>=1) and maximum (>min) number must be specified (*MinNumber*, *MaxNumber*)	
WSC001-10	IndividualDirectors	The corporation's first director(s).	

Attr Ref	Element Name	Description and Business Rules	Accepted Values
		See B-11 in the appendix • If a director is also an incorporator (*DirectorIncorporator* = 'true'), then the individual must not be populated as an incorporator in the request since the director will automatically be applied as incorporator when the web service is processed in OBR • Consent for each director must be explicitly obtained from the filer when Director is chosen as not an incorporator. (*DirectorConsent* = 'true')	
WSC001-11	SharesAndProvisions	The corporation's shares and provisions. See B-13 in the appendix • A corporation name can select pre-defined shares & provisions (*PredefinedText* = 'true') or supply their own text (*PredefinedText* = 'false') • Pre-defined text is set within OBR and is not sent in the request	
WSC001-12	IndividualIncorporators	The incorporators. See B-14 in the appendix • There must be at least 1 incorporator • If a director is also an incorporator, then no individual incorporator records are required since the director will automatically be applied as incorporator when the web service is processed	
WSC001-13	DeclarationYn	The filing must be authorized.	"Y" or "N" "1" or "0" "Yes" or "No" "true" or "false"

3.1.3 Response

Attr Ref	Element Name	Description	Accepted Values
WSC001-14	status	Request status: • 'Failed' – the service failed • 'Success' – the service was successful	"Failed" "Success"
WSC001-15	errors	Contains error descriptions if status is 'Failed' See B-65 in the appendix	
WSC001-16	TransactionId	The 'TransactionId' for the current service. Used in the, Retrieve Service Documents, web service.	String
WSC001-17	EntityIdentifier	OCN of the registered corporation.	String

		Only returned on successful requests	
WSC001-18	OriginalRequest	Successful response message will echo with all data submitted in the request	

3.2 WSA001 - Check Entity Name

3.2.1 Description

Name	OnbisCheckEntityName
Id	WSA001
Authority	Authorized service providers users can submit a request to check an entity name via web service
Business Service	N/a
Description	This web service allows service providers to submit a request to check an entity name against OBR specific name validation rules and, for certain corporation types, determine if a legal opinion is required. A Nuans validation is not included in this service. Service providers must submit this web service prior to submitting any web services with a proper name.

3.2.2 Request

Attr Ref	Element Name	Description	Accepted Values
WSA001-01	EntityType	The Entity Code which the name is being checked against. The URL of the web service call specifies which register to find the entity. The types available are based on the matching register.	"A" "W" "M" "H" "J" "C" "T" "D" "P" "Z" "N" "ASA" "CASA" "COSA" "K" "Y" "X" "R" "S" "U" "AN" "SP" "CO" "PN_GP" "PN_LP"

WSA001-02	EntityNameType	The entity name type to be checked against: 'en','fr' or 'enfrcombined'. Optional for EntityType with name type selections.	"en" "fr" "enfrcombined"
WSA001-03	EntityName	The entity name to be checked	String

3.2.3 Response

Attr Ref	Element Name	Description	Accepted Values
WSA001-04	status	Request status: • 'Failed' – the service failed • 'Success' – the service was successful	"Failed" "Success"
WSA001-05	errors	Contains error descriptions if status is 'Failed' See B-65 in the appendix	
WSA001-06	LegalOpinionReq	'true' if a legal opinion is required per name validation rules. If legal opinion is true, the registration will still be incorporated at time of submission when the OnbisIncorporateBCA WS status is 'success' 'false' if a legal opinion is not required	"Y" or "N" "1" or "0" "Yes" or "No" "true" or "false"

3.3 WSA011 - Entity Search

3.3.1 Description

Name	OnbisEntitySearch
Id	WSA011
Authority	No authority required to search for entities
Business Service	CMV002
Description	This web service allows authorized service providers to search for registered entities. Results are limited to the first 50 results. If more than 50 results are found, the response will fail with an error message.

3.3.2 Request

Attr Ref	Element Name	Description	Accepted Values
WSA011-00	language	The language parameter to use.	“En” or “Fr”
WSA011-01	SearchFor	The name of the entity including any previous names OR The unique identifier of the entity. Includes: • OCN (Ontario Corporation Number) • BIN (Business Identification Number) • BN (Business Number) • A name or identifier must be provided	String
WSA011-02	Register	The register to be searched (corporations, partnerships, or business names). Default is all registers.	"onbis-corporations" "onbis-businessnames" "onbis-partnerships"
WSA011-03	EntityType	Within a register, the type of entity. Ie. ‘A’ = Ontario Business Corporation. Default is all entity types.	"A" "W" "M" "H" "J" "C" "T" "D" "P" "Z" "N" "F" "ASA" "CASA" "COSA" "K" "Y" "X" "R" "S" "U"

Appendix A - Special Characters

A-1. JSON (REST)

The following characters are considered special characters in JSON and must be coded when being sent in a request:

- Backspace is replaced with \b.
- Form feed is replaced with \f.
- Newline is replaced with \n.
- Carriage return is replaced with \r.
- Tab is replaced with \t.
- Double quote is replaced with \"
- Backslash is replaced with \\

There is no XML CDATA equivalent in JSON. It is recommended to encode complex text or binary content using base64. Putting binary data into JSON is considered best practice.
